

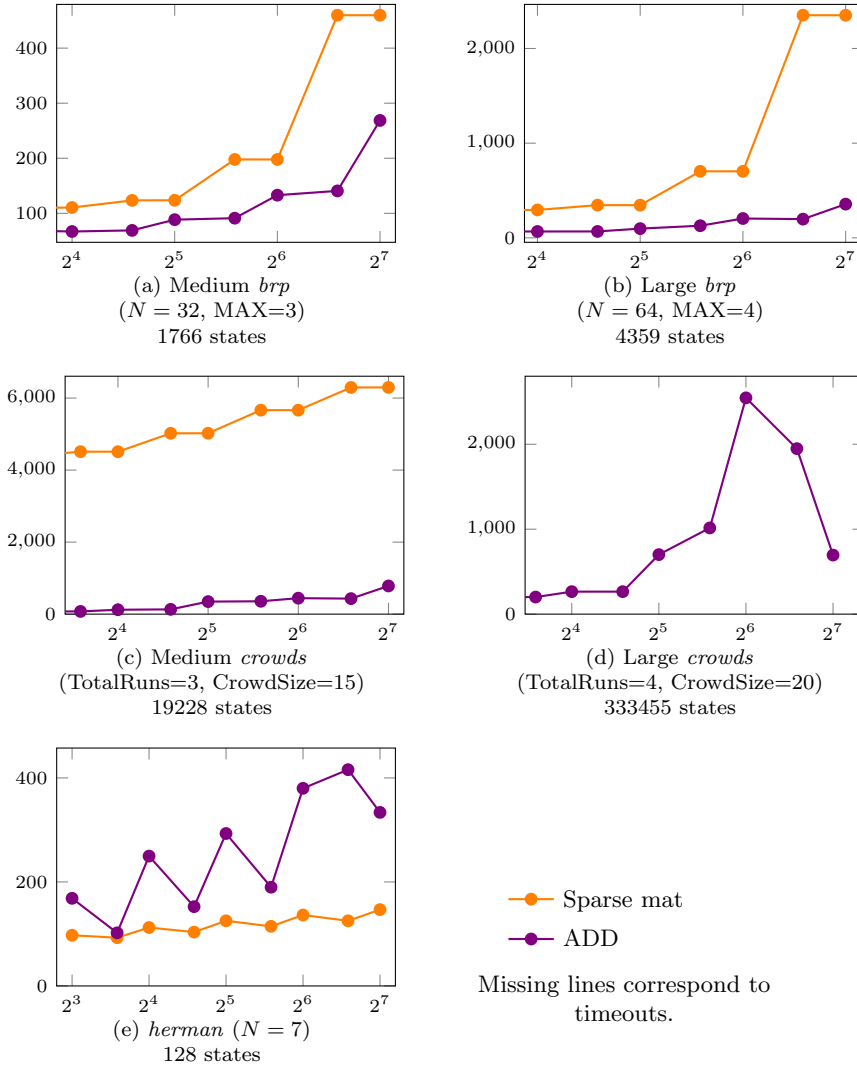

Figure 1: Maximum resident set size as reported by the system. x-axis: Length, y-axis: memory (mb).

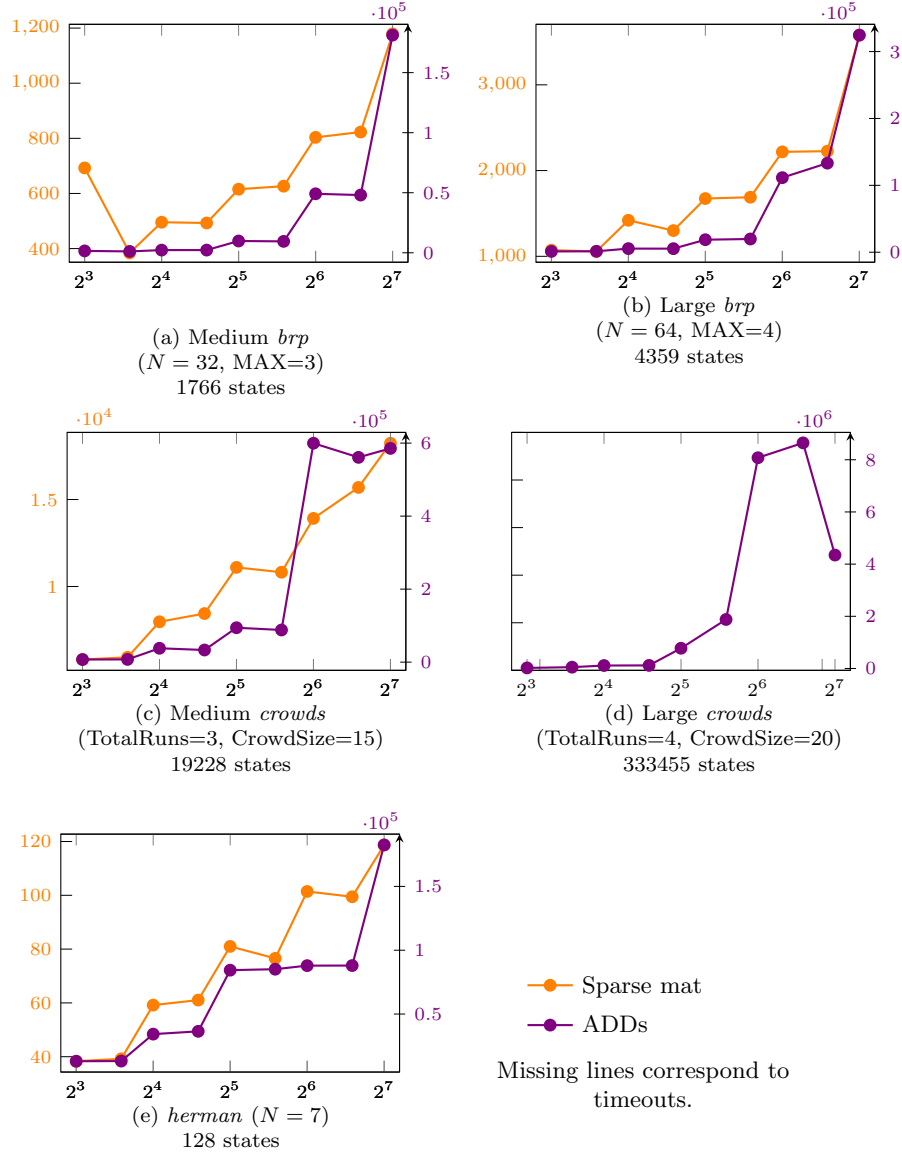

Figure 2: Precomputation time comparison across models and trace lengths. x-axis: Length, left (orange) y-axis : sparse matrix time (ms.), right (violet) y-axis : ADD time (ms.).

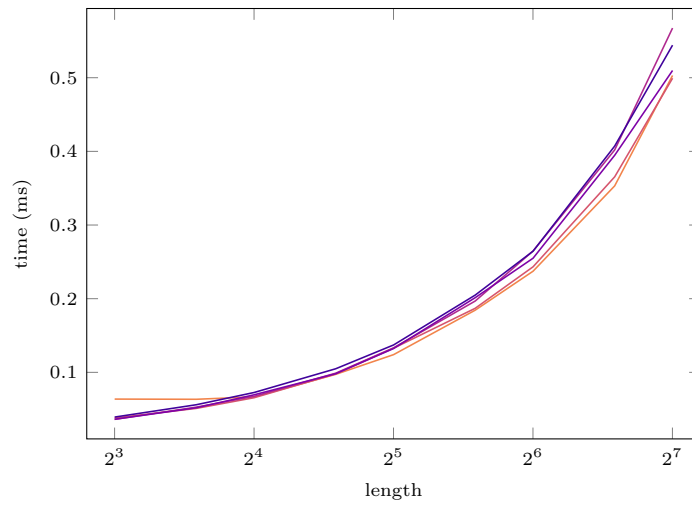

Figure 3: Average time to generate any trace of specific length using random walks. Each line corresponds to one of the models depicted above.
